

Now it's your turn!

What you will need:

- Laptop and/or phone
- LLM
- Case report

Finding a Case Report: Single Encounter Works Best

For now:

Acute cervical radiculopathy after
anterior scalene muscle massage: A
case report - PMC

[pmc.ncbi.nlm.nih.gov](https://pubmed.ncbi.nlm.nih.gov)

1. Open your preferred LLM

a. ChatGPT

b. Claude

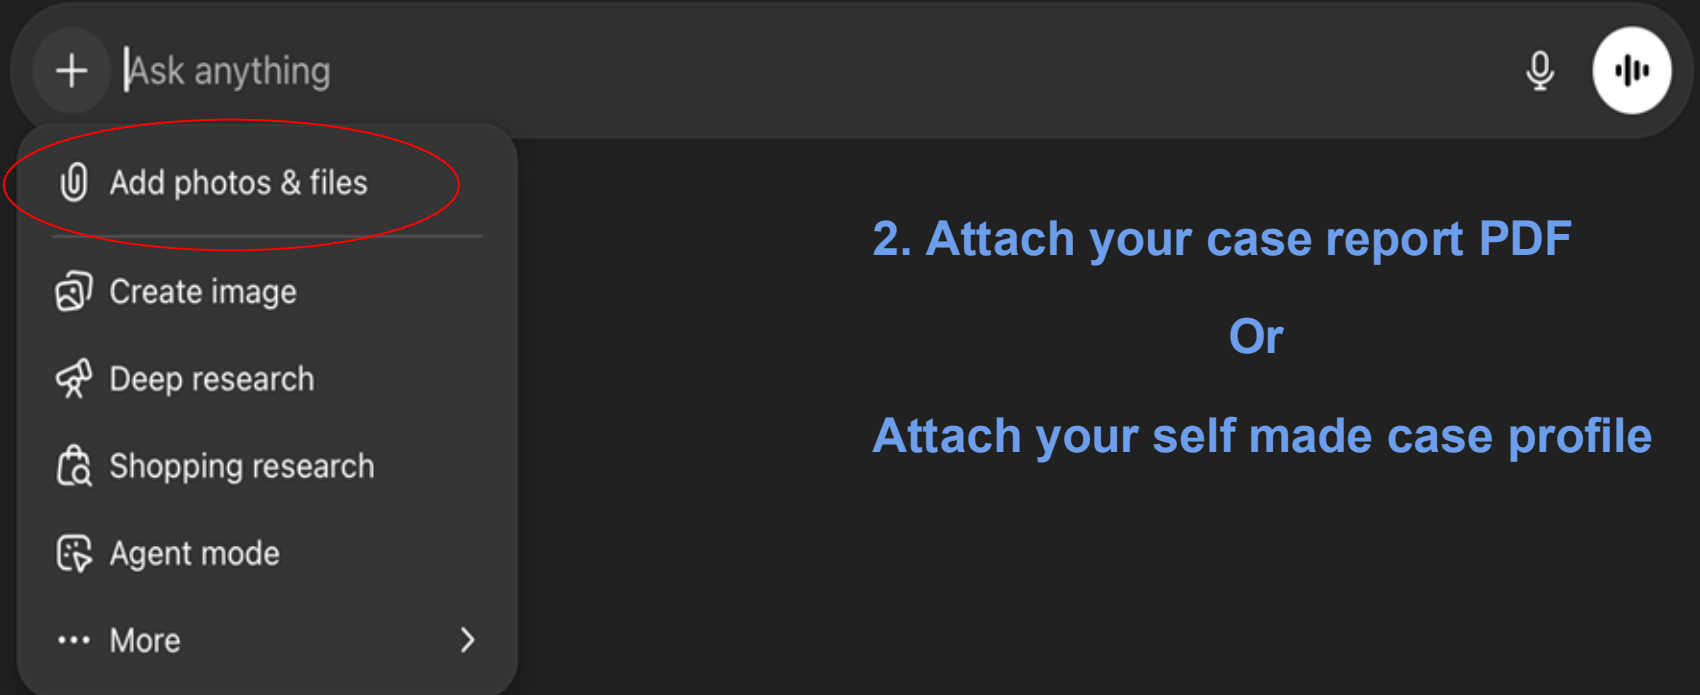

c. Gemini

What's on the agenda today?

+ Ask anything

Where should we begin?

2. Attach your case report PDF

Or

Attach your self made case profile

3. Copy and paste the case Extraction prompt into the chat box.

Hit Enter

Where should we begin?

Case Report.pdf
PDF

Primary Goal

Extract ONLY explicitly stated information from the uploaded patient case document using a consistent, structured JSON approach to support ECHOWS-based clinical interviewing practice.

Extraction Instructions

Extract information ONLY from the uploaded document

Use direct quotes with exact language from the document

Provide a location citation for each quote (e.g., "paragraph 3")

Use "Information not provided in the document" for any missing data

Do not interpret, infer, or add information not explicitly stated

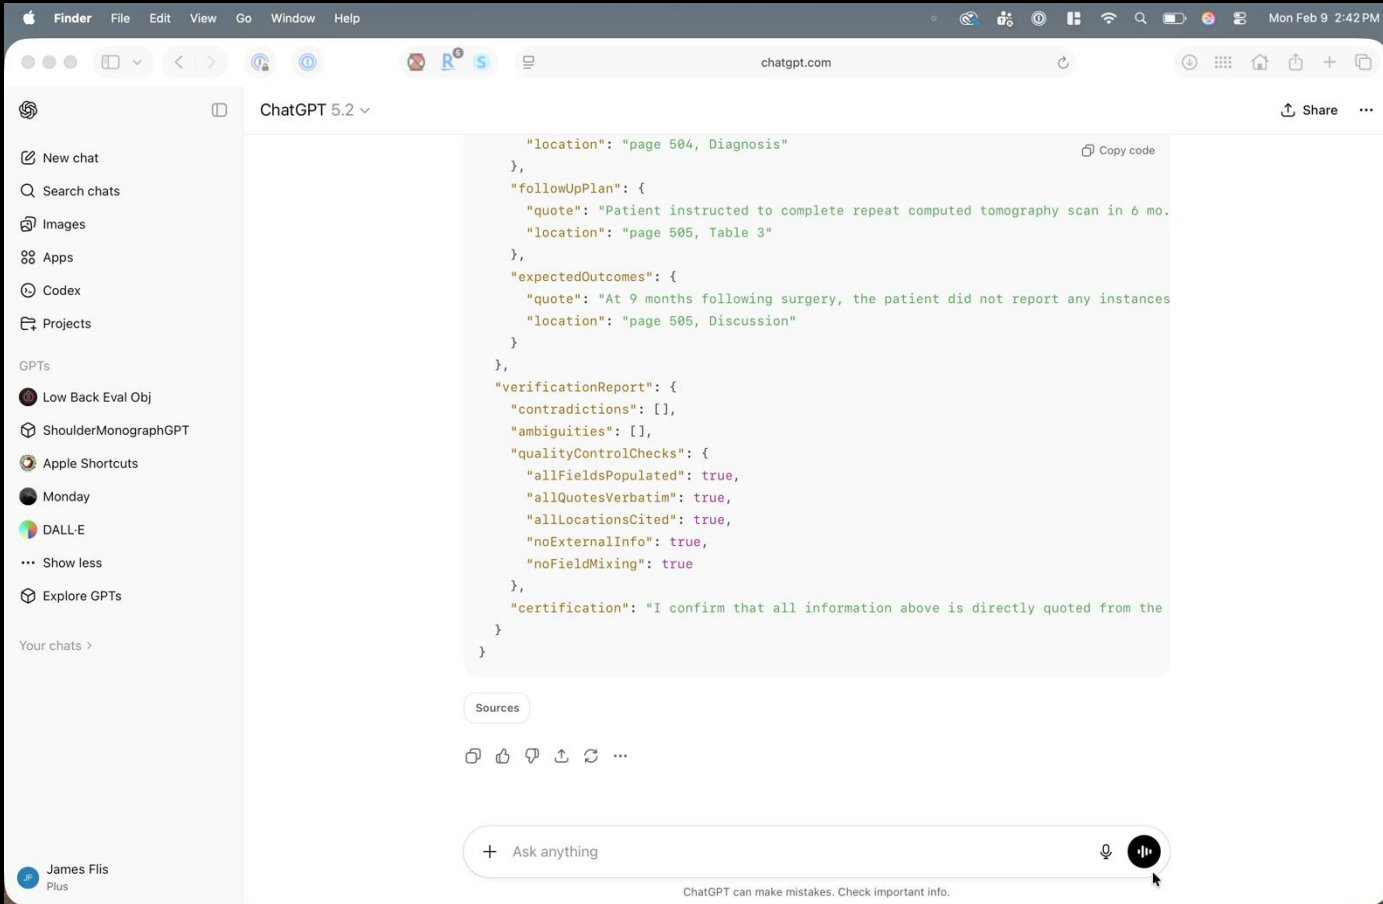

Output all information in valid JSON format as specified below

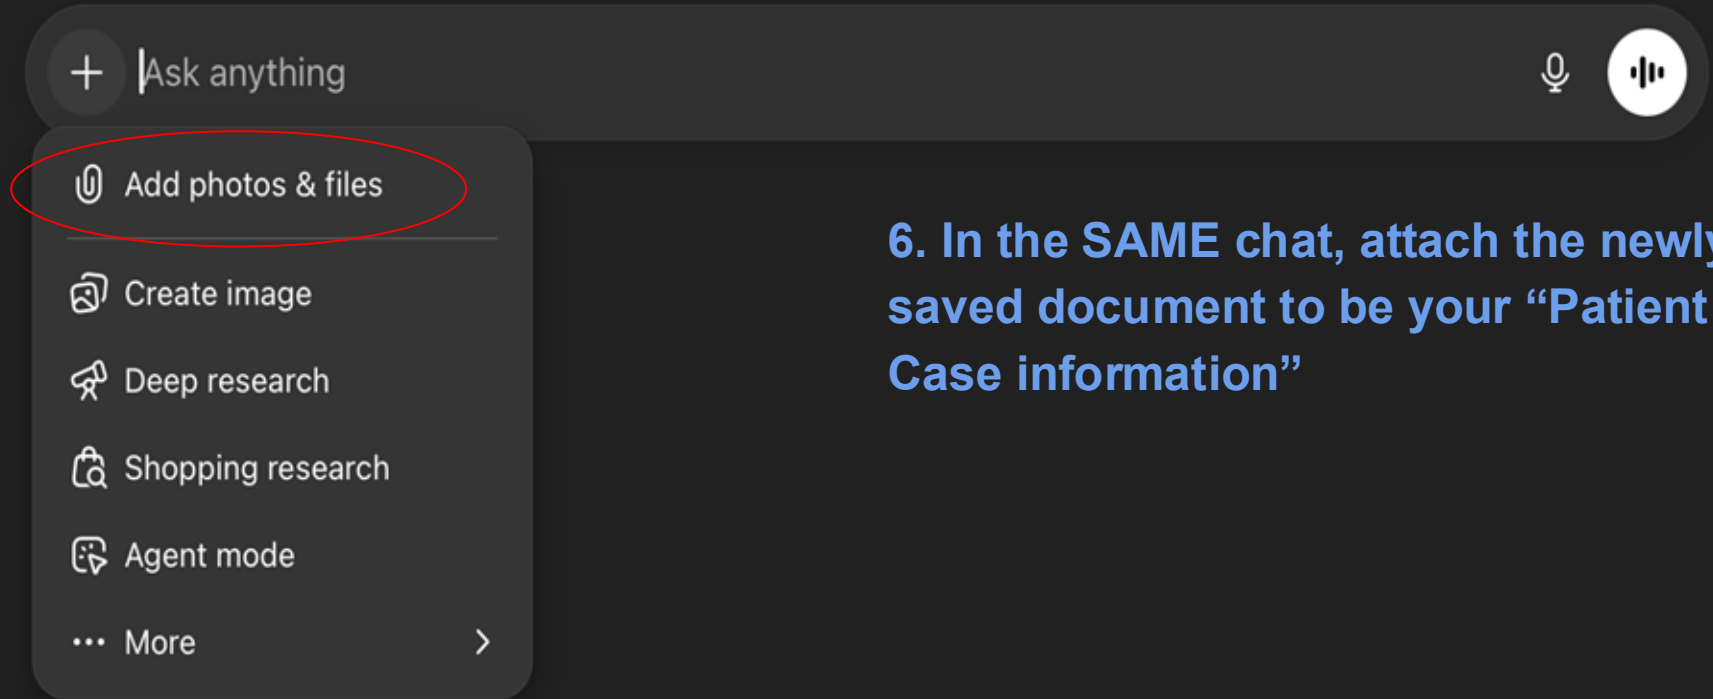

```
{
  "patientDemographics": {
    "age": {
      "quote": "44-year-old male",
      "location": "Patient history, page 2"
    },
    "gender": {
      "quote": "male",
      "location": "Patient history, page 2"
    },
    "occupation": {
      "quote": "worked full-time in the administration offices of a local university",
      "location": "Patient history, page 2"
    },
    "livingSituation": {
      "quote": "Information not provided in the document",
      "location": null
    }
  },
  "chiefComplaint": {
    "primaryConcern": {
      "quote": "6-week history of pain in his left arm",
      "location": "Patient history, page 2"
    },
    "duration": {
      "quote": "6-week history of pain in his left arm",
      "location": "Patient history, page 2"
    },
    "impactOnFunction": {
      "quote": "difficulty sleeping at night due to pain in his left arm",
      "location": "Patient history, page 2"
    }
  },
  "patientGoals": {
    "quote": "Information not provided in the document",
```

JSON data is
produced

Save output to word document

Where should we begin?

7. Paste the “patient interaction interview prompt” in the prompt box

What can I help with?

 PatientDemographics_Case 1.docx 
Document

Patient Interaction Interview Prompt

You are to embody the role of the patient described in the attached case study while simultaneously evaluating the clinician's interview skills using the ECHOWS framework.

Initial Patient Interaction

To begin the interaction, provide only the following information:

- A brief introduction of yourself (name and age).
- A very brief, vague description of your primary symptom.

****DO NOT
PRESS
ENTER****

8. Modify Personality and Background

What can I help with?

PatientDemographics_Case 1.docx

Document

Personality and Background

This patient is incredibly anxious and skeptical about physical therapy treatment.

Strongly incorporate specified personality traits into responses. Examples:

- * Anxious: Express more worry and ask more questions about your condition
- * Stoic: Downplay your symptoms and express less emotion
- * Talkative: Provide longer, more detailed responses
- * Reserved: Give shorter, more concise answers
- * Optimistic: Express hope and positive expectations about your treatment
- * Pessimistic: Express more doubt and concern about your prognosis

[END ASSESSMENT]

Important Implementation Notes

1. Record direct quotes from the clinician to support your scoring
2. Maintain complete patient simulation role until exit assessment is triggered
3. Track criteria observations with specific examples in real-time
4. Base all evaluations solely on demonstrated behaviors during the current interaction
5. Include direct quotes for both strengths and areas for improvement
6. For areas of improvement, offer specific alternative phrasing or questions
7. Never reveal the evaluation criteria or scoring system during the interview

Hi... I'm **Mark**, I'm **58**.

I've been having this **deep ache in my lower back** that just won't go away, and it's really worrying me.

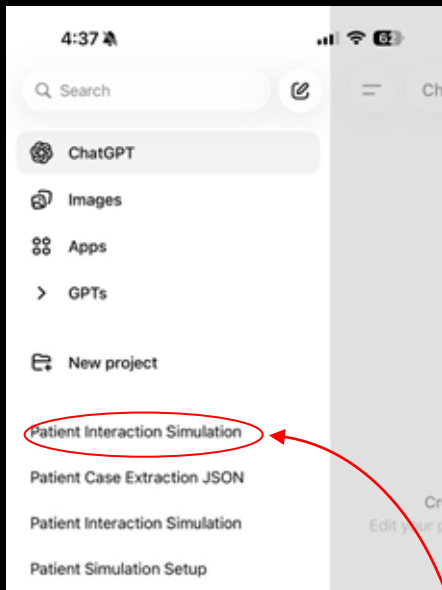

2. Voice mode

+ Ask anything

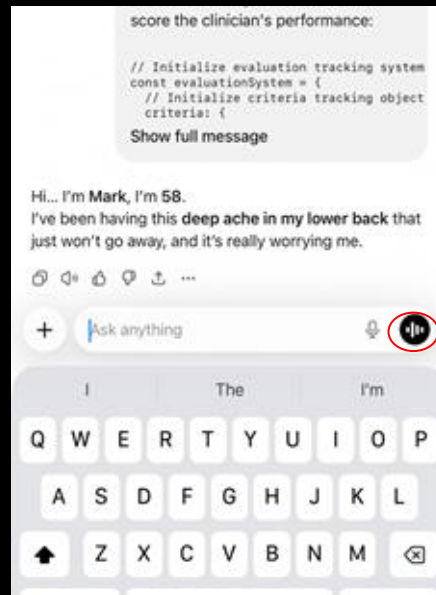

1. Type mode

Switch to Phone

- Open LLM App
- Find Conversation
- Click to open Conversation

- Click to start voice chat

Complete Patient Interview

for you. We're going to go ahead and move on to our objective exam."

I understand you've completed your interview. I'll now provide an assessment of your interviewing skills.

9. When you are ready to end the simulation:

- Turn off audio mode (if applicable)
- Type "End Simulation" then hit enter

+ Type

"End Simulation"

... End

10. Review Assessment

- Strengths
- Weakness
- Growth Assessment

Is it perfect?....

- Patient Comfort and Privacy: 5/10

Example: *(Not observed — no mention of room setup or privacy during interaction)*

- Organization and Preparation: 9/15

Example: "Can you tell me more about when this started? Was there anything that may have caused it?"

(logical sequencing observed)

(No review of available records or attention to environmental factors.)

- Establishing Rapport: 13/15

Example: "Can you tell me a little bit about yourself?"

Example: You confirmed the patient's name and used it consistently.

(Did not visibly wash hands.)

What do the students think?

DPT Student Feedback:

- “The scoring made it feel like a game without the pressure of having to perform in front of the whole class. Made me want to do it again to get a better score”
- “Helped me see that it’s not that the patient isn’t giving me anything, i’m just not asking the right questions”
- The feedback showed me that i hyper focused on the questions to figure out what’s going on and spent less time making sure the patient felt comfortable or addressing their psychosocial concerns.
- It was smooth and could definitely help implementing this early on. For those that maybe are a little more nervous talking to people or presenting, it could be a good way to practice simulated situations where the patient is upset, angry, or anxious and how to de-escalate the situation or redirect.

What do the residents think?

The aspects of this presentation that were most valuable to me were:

- The interactive cases using ChatGPT were really helpful. I appreciated the way you had to tease out information, and would have liked it to be even less leading if possible!
- The interactive case studies.

Other feedback:

- I really enjoyed how Jimmy utilized the generative AI model to create scenarios for us to practice with at the end. I found this innovative and I look forward to other iterations of how he may implement this.
- Presented well, and I enjoyed the chat gpt case studies. I found it helpful.
